

CUBESPACE

EDUCATIONAL FACILITIES

At present, many Czech towns or villages face shortage of kindergarten capacities. The CUBESPACE modular system is an ideal solution to handle the situation. It is variable and flexible and, as such, it can be used to boost up capacities quickly. Our aim is to find and implement a solution that meets all requirements of the client in terms of layout and operation. Strict compliance with public health and legal regulations is a matter of course for us. If the demographic situation changes, modules can discharge a different role – for example, they can become a part of sports grounds. Alternatively, they can be easily relocated – to a place where they are needed at the moment.

Why is it good to opt for a kindergarten structure made of modules?

- Particular focus on hygiene requirements (layout and parameters of the structure's interior ambience)
- Selecting high-quality materials and technologies providing for top comfort and reduction of operational costs
- Fast and all-year construction with minimum burden upon surroundings of the structure
- Easy expansion, downsizing or relocation of premises
- Environmentally-friendly
- Modern and playful design
- Providing for comprehensive services associated with preparation and execution of construction

How is a modular structure built?

- All modules (individual parts of the structure) are prefabricated and transported to the site for assembly. This can be done in days.
- At the site, a crane installs the modules on prepared foundation structures
- The structure is connected to the utilities networks and the building is completed

Benefits of modular development

- Keeping up with development of the most sophisticated technologies and trends in design
- Stressing compliance with the strictest requirements of technical standards in force
- Significant heat and energy savings
- Providing for all stages of engineering (architectural design, project, dealing with authorities, preparation of land plot, comprehensive production and supply of the structure and launching the structure into operation)
- Goal-oriented co-operation with investor guarantees ideal execution of the project
